

Bash scripting cheatsheet

Example

```
#!/usr/bin/env bash

NAME="John"
echo "Hello $NAME!"
```

Variables

```
NAME="John"
echo $NAME
echo "$NAME"
echo "${NAME}!"
```

String quotes

```
NAME="John"
echo "Hi $NAME" #=> Hi John
echo 'Hi $NAME' #=> Hi $NAME
```

Conditional execution

```
git commit && git push
git commit || echo "Commit failed"
```

Functions

```
get_name() {
  echo "John"
}

echo "You are $(get_name)"
```

Shell execution

```
echo "I'm in $(pwd)"
echo "I'm in `pwd`"
# Same
```

Conditionals

```
if [[ -z "$string" ]]; then
  echo "String is empty"
elif [[ -n "$string" ]]; then
  echo "String is not empty"
fi
```

See: Functions

Strict mode

```
set -euo pipefail
IFS=$'\n\t'
```

See: Unofficial bash strict mode

See: Conditionals

Brace expansion

```
echo {A,B}.js

{A,B}                Same as A B
{A,B}.js             Same as A.js B.js
{1..5}               Same as 1 2 3 4 5
```

See: Brace expansion

Parameter expansions

Basics

```
name="John"
echo ${name}
echo ${name:1/1} #=> "john" (substitution)
echo ${name:0:2} #=> "Jo" (slicing)
echo ${name:2} #=> "hn" (slicing)
echo ${name::-1} #=> "John" (slicing)
echo ${name:~1} #=> "n" (slicing from right)
echo ${name:~(-2):1} #=> "h" (slicing from right)
echo ${food:-Cake} #=> $food or "Cake"
```

```
length=2
echo ${name:0:length} #=> "Jo"
```

See: Parameter expansion

```
STR="/path/to/foo.cpp"
echo ${STR%.cpp} # /path/to/foo
echo ${STR%.cpp}.o # /path/to/foo.o

echo ${STR##*.} # cpp (extension)
echo ${STR##*/} # foo.cpp (basepath)

echo ${STR%*/} # path/to/foo.cpp
echo ${STR##*/} # foo.cpp

echo ${STR/foo/bar} # /path/to/bar.cpp
```

```
STR="Hello world"
echo ${STR:0:5} # "world"
echo ${STR:-5:5} # "world"
```

```
SRC="/path/to/foo.cpp"
BASE=${SRC##*/} #> "foo.cpp" (basepath)
DIR=${SRC%$BASE} #> "/path/to/" (dirpath)
```

Substitution

\${FOO%suffix}	Remove suffix
\${FOO%prefix}	Remove prefix
\${FOO%%suffix}	Remove long suffix
\${FOO%%prefix}	Remove long prefix
\${FOO/from/to}	Replace first match
\${FOO//from/to}	Replace all
\${FOO%from/to}	Replace suffix
\${#FOO}	Length of \$FOO

Default values

\${FOO:-val}	\$FOO, or val if not set
\${FOO:=val}	Set \$FOO to val if not set
\${FOO:+val}	val if \$FOO is set
\${FOO:?message}	Show error message and exit if \$FOO is not set

The : is optional (eg, \${FOO=word}) works)

Comments

```
# Single line comment

: '
This is a
multi line
comment
'
```

Substrings

\${FOO:0:3}	Substring (position, length)
\${FOO:-3:3}	Substring from the right

Manipulation

```
STR="HELLO WORLD!"
echo ${STR,,} #> "hello world!" (lowercase is)
echo ${STR,,} #> "hello world!" (all lowercase)
```

```
STR="hello world!"
echo ${STR^} #> "Hello world!" (uppercase is)
echo ${STR^^} #> "HELLO WORLD!" (all uppercase)
```

Loops

Basic for loop

```
for i in /etc/rc.*; do
  echo $i
done
```

C-like for loop

```
for ((i = 0 ; i < 100 ; i++)); do
  echo $i
done
```

Ranges

```
for i in {1..5}; do
  echo "Welcome $i"
done
```

With step size

```
for i in {5..50..5}; do
  echo "Welcome $i"
done
```

Reading lines

```
< file.txt | while read line; do
  echo $line
done
```

Forever

```
while true; do
  ...
done
```

Functions

Defining functions

```
myfunc() {
    echo "hello $1"
}

# Same as above (alternate syntax)
function myfunc() {
    echo "hello $1"
}

myfunc "John"
```

Returning values

```
myfunc() {
    local myresult='some value'
    echo $myresult
}

result="$(myfunc)"
```

Arguments

\$#	Number of arguments
\$*	All arguments
\$@	All arguments, starting from first
\$1	First argument
See Special parameters.	

Raising errors

```
myfunc() {
    return 1
}

if myfunc; then
    echo "success"
else
    echo "failure"
fi
```

Conditionals

Conditions

Note that `[]` is actually a command/program that returns either 0 (true) or 1 (false). Any program that obeys the same logic (like all base utils, such as `grep(1)` or `ping(1)`) can be used as condition, see examples.

<code>[] -z STRING</code>	Empty string
<code>[] -n STRING</code>	Not empty string
<code>[] STRING == STRING</code>	Equal
<code>[] STRING != STRING</code>	Not Equal
<code>[] NUM -eq NUM</code>	Equal
<code>[] NUM -ne NUM</code>	Not equal
<code>[] NUM -lt NUM</code>	Less than
<code>[] NUM -le NUM</code>	Less than or equal
<code>[] NUM -gt NUM</code>	Greater than
<code>[] NUM -ge NUM</code>	Greater than or equal
<code>[] STRING =~ STRING</code>	Regex
<code>((NUM < NUM))</code>	Numeric conditions
<code>[] -o noclobber</code>	IF OPTIONNAME is enabled
<code>[] ! EXPR</code>	Not
<code>[] X]] && [[Y]]</code>	And
<code>[] X]] [[Y]]</code>	Or

File conditions

<code>[] -e FILE</code>	Exists
<code>[] -r FILE</code>	Readable
<code>[] -h FILE</code>	Symlink
<code>[] -d FILE</code>	Directory
<code>[] -w FILE</code>	Writable
<code>[] -s FILE</code>	Size is > 0 bytes
<code>[] -f FILE</code>	File
<code>[] -x FILE</code>	Executable
<code>[] FILE1 -nt FILE2</code>	1 is more recent than 2
<code>[] FILE1 -ot FILE2</code>	2 is more recent than 1
<code>[] FILE1 -ef FILE2</code>	Same files

Example

```
if ping -c 1 google.com; then
    echo "It appears you have a working internet connection"
fi

if grep -q 'foo' ~/.bash_history; then
    echo "You appear to have typed 'foo' in the past"
fi

# String
if [[ -z "$String" ]]; then
    echo "String is empty"
elif [[ -n "$String" ]]; then
    echo "String is not empty"
fi

# Combinations
if [[ X ]] && [[ Y ]]; then
    ...
fi

# Equal
if [[ "SA" == "SB" ]]; then
    ...
fi

# Regex
if [[ "A" =~ "." ]]; then
    ...
fi

if (( $a < $b )); then
    echo "$a is smaller than $b"
fi

if [[ -e "file.txt" ]]; then
    echo "file exists"
fi
```

Arrays

Defining arrays

```
Fruits=('Apple' 'Banana' 'Orange')

Fruits[0]="Apple"
Fruits[1]="Banana"
Fruits[2]="Orange"
```

Operations

```
Fruits=("${Fruits[@]}" "Watermelon") # Push
Fruits+=('Watermelon') # Also Push
Fruits=( ${Fruits[@]/Ap*/} ) # Remove by regex match
unset Fruits[2] # Remove one item
Fruits=("${Fruits[@]}" "${Fruits[@]}") # Duplicate
Fruits=("${Fruits[@]}" "${Veggies[@]}") # Concatenate
lines=$(cat "logfile") # Read from file
```

Working with arrays

```
echo ${Fruits[0]} # Element #0
echo ${Fruits[@]} # All elements, space-separated
echo ${#Fruits[@]} # Number of elements
echo ${#Fruits} # String length of the 1st element
echo ${#Fruits[3]} # String length of the Nth element
echo ${Fruits[@]:3:2} # Range (from position 3, length 2)
```

Iteration

```
for i in "${arrayName[@]"; do
    echo $i
done
```

Dictionaries

Defining

```
declare -A sounds

sounds[dog]="bark"
sounds[cow]="moo"
sounds[bird]="tweet"
sounds[wolf]="howl"

# Declares sound as a Dictionary object (aka associative array).
```

Working with dictionaries

```
echo ${sounds[dog]} # Dog's sound
echo ${sounds[@]} # All values
echo ${!sounds[@]} # All keys
echo ${#sounds[@]} # Number of elements
unset sounds[dog] # Delete dog
```

Iteration

```
Iterate over values
for val in "${sounds[@]"; do
    echo $val
done

Iterate over keys
for key in "${!sounds[@]"; do
    echo $key
done
```

Options

Options

set -o noclobber	# Avoid overlay files (echo "hi" > foo)
set -o errexit	# Used to exit upon error, avoiding cascading errors
set -o pipefail	# Unveils hidden failures
set -o nounset	# Exposes unset variables

Glob options

set -o nullglob	# Non-matching globs are removed ('*.foo' => '')
set -o failglob	# Non-matching globs throw errors
set -o nocaseglob	# Case insensitive globs
set -o globdots	# Wildcards match dotfiles ("*.sh" => ".foo.sh")
set -o globstar	# Allow ** for recursive matches ('lib/**/*.rb' => 'lib

Set GLOBIGNORE as a colon-separated list of patterns to be removed from glob matches.	
---	--

History

Commands

history	Show history
shopt -s histverify	Don't execute expanded result immediately

Operations

!!	Execute last command again
!!:s/<FROM>/<TO>/	Replace first occurrence of <FROM> to <TO> in most recent command
!!:gs/<FROM>/<TO>/	Replace all occurrences of <FROM> to <TO> in most recent command
!:t	Expand only basename from last parameter of most recent command
!:h	Expand only directory from last parameter of most recent command
!! and !\$ can be replaced with any valid expansion.	

Expansions

!\$	Expand last parameter of most recent command
!*	Expand all parameters of most recent command
!-n	Expand nth most recent command
!n	Expand nth command in history
!<command>	Expand most recent invocation of command <command>

!!:n	Expand only nth token from most recent command (command is 0; first argument is 1)
!A	Expand first argument from most recent command
!\$	Expand last token from most recent command
!!:n-m	Expand range of tokens from most recent command
!!:n-\$	Expand nth token to last from most recent command
!! can be replaced with any valid expansion i.e. !cat, !-2, !42, etc.	

Miscellaneous

Numeric calculations

\$(a + 200)	# Add 200 to \$a
\$(RANDOM%200)	# Random number 0..200

Inspecting commands

command -V cd
#=> "cd is a function/alias/whatever"

Trap errors

trap 'echo Error at about \$LINENO' ERR
or
traperr() { echo "ERROR: \${BASH_SOURCE[1]} at about \${BASH_LINENO[0]}" }
set -o erretrace trap traperr ERR

Source relative

source "\${0%/*}/../share/foo.sh"

Directory of script

DIR="\${0%/*}"

Getting options

while [["\$1" =~ ^- .&& ! "\$1" == "--"]]; do case \$1 in -V --version) echo \$version exit ;; -s --string) shift; string=\$1 ;; -f --flag) flag=1 ;; esac; shift; done if [["\$1" == "--"]]; then shift; fi

Special variables

\$?	Exit status of last task
\$!	PID of last background task
\$\$	PID of shell

Subshells

```
(cd somedir; echo "I'm now in $PWD")
pwd # still in first directory
```

Redirection

python hello.py > output.txt	# stdout to (file)
python hello.py >> output.txt	# stdout to (file), append
python hello.py 2> error.log	# stderr to (file)
python hello.py 2>&1	# stderr to stdout
python hello.py 2>/dev/null	# stderr to (null)
python hello.py &>/dev/null	# stdout and stderr to (null)
python hello.py < foo.txt	# feed foo.txt to stdin for python

Case/switch

case "\$1" in start up) vagrant up ;; *) echo "Usage: \$0 {start stop ssh}" ;; esac
--

printf

printf "Hello %, I'm %" Sven Olga
#=> "Hello Sven, I'm Olga"
printf "1 + 1 = %d" 2
#=> "1 + 1 = 2"
printf "This is how you print a float: %f" 2
#=> "This is how you print a float: 2.000000"

Heredoc

cat <<END hello world END

Reading input

```
echo -n "Proceed? [y/n]: "
read ans
echo $ans
```

```
read -n 1 ans    # Just one character
```

Go to previous directory

pwd # /home/user/foo
cd ..

\$0

Filename of the shell script

See [Special parameters](#).

```
cd bar/  
pwd # /home/user/foo/bar  
cd -  
pwd # /home/user/foo
```
